STRATEGY & ECONOMIC RATIONALE

All stocks from NYSE, AMEX, and NASDAQ are part of the investment universe. Stocks are then sorted each month into short-interest deciles based on the ratio of short interest to shares outstanding. The investor then goes long on the decile with the lowest short ratio and short on the decile with the highest short ratio. The portfolio is rebalanced monthly, and stocks in the portfolio are weighted equally.

| BUY | SELL |
|--|---|
| the decile with the lowest short ratio | the decile with the highest short ratio |

PARAMETER & VARIABLES

| PARAMETER | VALUE |
|---------------------------|-----------------|
| MARKETS TRADED | Equity |
| FINANCIAL INSTRUMENTS | Stocks |
| REGION | United States |
| PERIOD OF REBALANCING | Monthly |
| NO. OF TRADED INSTRUMENTS | 1000 |
| WEIGHTING | Equal weighting |
| LOOKBACK PERIODS | Monthly |
| LONG/SHORT | Long & Short |

ALGORITHM

```
